

# REFLECTION PRODUCTS

## SAFETY AND SECURITY PRODUCTS

- 140° + actual viewing angle. (With less viewing angle the viewed object is larger compared to the 160° mirrors.)
- Both indoor or outdoor versions.
- Adjustable mounting bracket(s).
- T-304 STAINLESS STEEL mirror and back “SSO” outside models.
- Mirror comes assembled (Minor assembly required for the mounting bracket).
- Water-tight seal holding the mirror lens to the back-plate.

(SA-SSO34 Pictured)

- Construction sites
- Parking Garages
- Roads & Streets
- Driveways to help you see traffic when an obstruction is blocking your view.
- Clearly see areas around a corner, hidden entrance way, or blind area.
- Recommended mounting height: 8 to 10 feet.

### Round Convex Steel Mirrors

**Description :** Circular convex Stainless Steel mirror.

1. Constructed of T-304 20 Gage stainless steel.
2. Polished mirror to a NO:9 mirror finish.
3. Both Stainless Steel Back (SA-SSOxx) and Hardboard Back (SA-SSxx) versions are glued and sealed to the mirror lens with a nylon molded rim around the mirror edge.
4. Ball & Swivel Mounts with extension arms for flexible mounding needs.
5. Shatterproof and unbreakable lens with excellent mirror qualities.
6. Fully weatherproof SA-SSOxx version made to last for many years.
7. The Stainless Steel Convex Mirrors have less of a convex curvature to the lens, which narrows the field of view and provides better visibility of distant objects.

(Reflected objects around 100 feet away from the mirror appear approximately 25% larger when compared to the standard 160° convex mirrors.)
